

POACHING PREVENTION

Katie has a first-class degree in Zoology from the University of Leicester. As part of her undergrad she conducted field research in Brazil and Spain, with specific focus on conservation biology, subtropical physiology & ecology, and field ecology.

After leaving university Katie travelled to Northern Thailand where she worked for a conservation and community project dedicated to returning Asian elephants from tourist camps to their natural forested habitat. Katie was directly involved with elephant behaviour studies, health checks

and biodiversity surveys. She also worked with local communities on development projects, including the implementation of an Environmental Education programme.

Katie's passion for the prevention of poaching and wildlife exploitation motivated her to undertake a master's degree in Wildlife Conservation and Drone Applications. Katie completed her master's this year and is presently working as an Assistant Ecologist.
